

Scottish Health Innovations Ltd (SHIL)

PRISM GLASSES™

Prism Glasses provide portable mirror therapy that can be used in the treatment of phantom limb pain following amputation. The use of Prism Glasses may also aid rehabilitation of paralysed limbs following a stroke.

The prism is mounted on one lens whilst the other lens is completely concealed. Reflecting the image of the functioning limb provides the illusion that the amputated or paralysed limb is still operative, in turn alleviating phantom pain or improving movement of paralysed limbs.

The design of Prism Glasses was the vision of a highly experienced team of healthcare professionals including a Pain Management Consultant, an Optometrist, an Ophthalmologist, Health Psychologist, Stroke Physician and a Physiotherapist.

Portable mirror therapy allows treatment and rehabilitation to be carried out within the home environment. For more information and to purchase please visit www.prismglasses.co.uk

Please contact SHIL If you would like to:

- Receive information on price and availability
- Place an order
- Request further information on a product
- Enquire about manufacturing, licensing or distribution opportunities
- Receive advice on how to take a project further
